

Fuel Tank

actually fuel tank system design and produce base frame type for compact and basic installation, for big size engines base frame has not enough capacity, For long term running capacity the fuel tanks design as an externally, and install separately

they supply fuel for a long time period and for continuous running, for hot climate and for cold climate keep the fuel more suitable form, more suitable degree

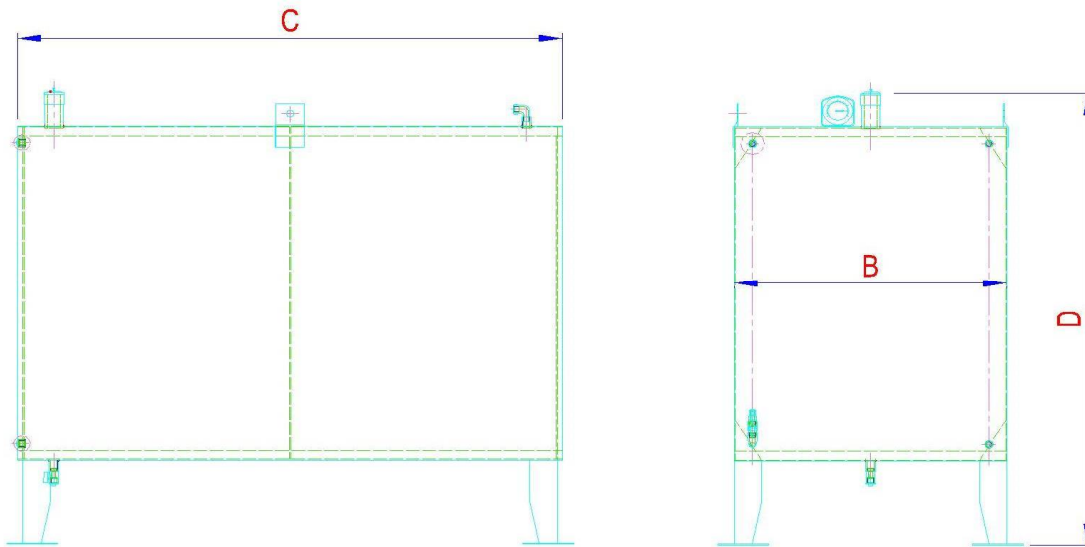

Larger size tank also prevent the engine to get the sink dust and dirt

Standart Features

- * inlet and outlets
- * outlet valve
- * drain
- * Filling cap
- * Mechanic gauge

Optional Features

- * Electronic Gauge
- * Low Fuel Alarm
- * Auto Fuel Filling Control
- * Fuel transfer pump
- * special dimension
